Customers have changed. With digital screens providing access to an ever-growing number of channels, people have a huge spectrum of new, intimate ways of connecting with brands. They can interact and shop any time and on the go. In addition, customers have almost unlimited access to products, product information, and reviews—instantly and at their fingertips, empowering them to talk about brands and voice their opinions like never before.

Marketing is all about the customer’s experience, and customer engagement is the name of the game. Because they are always "on," customers are potentially always addressable, and campaign management needs to be reimagined for mobility.

But the traditional, linear funnel model doesn’t work anymore, because today’s customer journey is not as straightforward as it once was. But not only that, personalized campaigns, which have become mainstream in recent years, are no longer sufficient to reach the always-on consumer.

On top of that, marketers themselves are changing. Because they, too, are always on mobile devices and channels, marketing practices must adapt.
ADOBE CAMPAIGN

**Touchpoint marketing** is a way to meet these demands.

Touchpoint marketing aims to orchestrate an enticing and contextual customer experience to continuously and emotionally inspire the always-connected customer.

Touchpoint marketing fits the world we live in today. Customers are empowered, and they expect consistent and personalized experiences delivered in context. Yet marketers often frustrate them with an onslaught of disconnected, irrelevant communications.

To win, marketers must reinvent themselves to engage their customers in meaningful conversations on any device or channel.

Digital screens and mobile devices hold the key to connecting on this one-to-one level. Companies that layer pertinent and contextual data into their digital strategy will also cultivate stronger brand advocates and drive greater brand affinity, loyalty, and purchases.

This guide outlines the touchpoint marketing approach, with a focus on several key points. One is the blending of art and science to create compelling, emotional experiences. Another is moving from the model of the marketing funnel to the customer lifecycle. Finally, we’ll discuss shifting from personalized campaigns to contextual interactions.
The art and science of inspiring the customer

In today’s complex, cross-channel marketing world, proficiency with data and technology is fundamental to success. But there’s more to inspiring customers than data. Marketing must generate and sustain emotions in customers. To create the most enticing experiences, data (science) and creativity (art) must work together.

Most companies today face customer journeys that are made ever-more complex because of the multiplicity of channels. Of course, marketing has never been about just one channel, but channels are now emerging at an ever-increasing pace. As a result, it’s a complicated affair to map out a seamless customer journey.

This is where joining the art and science of marketing really shines. Using art and emotion helps foster and sustain greater interactions. These, in turn, create data that enriches a brand’s insight into the customer journey and needs.

Together, these actions form a cycle that has the power to generate brand affinity, attachment, and advocacy.
The science of acquiring and using data

Brands that want to succeed in today’s customer-centric world must harness and use customer data. Marketers require in-depth customer knowledge and insights to prioritize which experiences are best for each customer. They need a single, 360-degree view of each customer that melds all sources of available data in real time. This knowledge has to come from all touchpoints and channels. It must be compiled centrally and shareable across the enterprise.

To accomplish these aims, the discipline of customer analytics needs to be an integral part of a brand’s marketing process.

Traditionally, marketers have used analytics retroactively to understand past campaigns and improve them for the future. The most successful marketers today also use analytics in real time to inform customer context at all points within the customer lifecycle on any device.
The art of building emotion

The human brain is divided into two hemispheres. The right hemisphere handles creativity and emotion, and the left hemisphere handles knowledge and reason. In the past, marketing focused primarily on left-brain thinking.

With society paying more attention to the potential of the right hemisphere, a scope of opportunities opens up for marketers. How can you tap into emotions to develop stronger relationships with customers and cultivate greater loyalty?

The way to build emotion is to deliver enticing content to the right person at the right moment along the customer lifecycle. The real emotional metric is the value that customers get from the content you provide them.
Melding art and science at vente-privee

For vente-privee.com, combining art and science to focus on customers is integral to its success.

Unlike most retailers, vente-privee’s inventory changes frequently. With 10,000 flash sales every year—each lasting only 3–5 days—the company is constantly creating new product images. Adobe Creative Cloud solutions help vente-privee produce up to 20,000 compelling, high-quality photos a day.

The brand doesn’t rely on search engines to generate traffic, but instead carries out an intensive program of contextual emails. Adobe Campaign enables vente-privee to access customer profiles in real time to determine which types of products interest each customer. By combining this information with sophisticated audience segments, the company reliably delivers contextualized email messages to over 23 million global members.

“Our business depends upon our ability to find the right customers quickly,” says Benhaim. “With Adobe Marketing Cloud and Creative Cloud, we have the tools to deliver the right message to the right audience at the right time.”

“We see the customer as the center of our entire business.”

Ilan Benhaim, co-founder and executive partner in charge of innovation and technology

The proliferation of digital and personal technologies and social networks has disrupted the traditional, linear path of consumer purchasing behavior.

Today, consumer activity is far more complex. Because people now have access to products, product information, and reviews at their fingertips, their experiences and decision processes are more fragmented than linear.

In this context, the model of the modern customer lifecycle is more relevant than the traditional, “flat” marketing funnel. The figure at the right expresses this circuitous lifecycle path as a pretzel with numerous twists and turns. To support this path, marketers must map out where customers are in the pretzel—in other words, evaluate the importance of each touchpoint—and adjust their responses in real time.
To orchestrate a continuous relationship throughout the customer lifecycle, marketers must consider several points.

- Reframe the customer lifecycle as a complete experience within which touchpoints are milestones along the way. Individual touchpoints are important, of course, but focusing on the lifecycle as the indivisible unit helps you maintain consistency between touchpoints and between channels.

- Focus on the high-value tasks that customers try to achieve. These tasks might cross online and offline channels, such as direct mail, email, kiosk, in-store, mobile apps, social networks, and website.

- Design for complete, end-to-end touchpoint experiences that work together and support each other.

1. Keep an eye on the big picture
2. Focus on high-value tactics
3. Design an end-to-end strategy
From personalized campaigns to contextual interactions

In the past few years, personalized campaigns have gone from cutting edge to mainstream. They've worked so well that brands everywhere have jumped on the wagon.

But campaigns that are merely personalized are so common now that they no longer differentiate the brands using them. Not only that, consumers are starting to tune them out, with 63% of consumers feeling "numb" by the personalized-campaign experience.

Marketers need a new model. **Contextual experiences** are proving the answer for the always-connected consumer. With contextualization, the personalization focus has gone from segments to individuals.

How do you get there? This is where the blending of art and science comes in. Data allows you to move from mere personalization into the realm of contextual marketing, and art engages the emotions.

Identifying individual customers and their contexts

Consumers interact with your brand outside of campaigns all the time. For this reason, marketers need to look beyond aggregate customer segments and stitch together a singular identity for each customer across all channels.

To achieve this, marketers must study in detail the devices, locations, time, activities, and other factors defining the customer context.

In fact, as shown in the figure, research indicates that most brands today do not have a strong capability in the single-customer viewpoint.

Building the total customer relationship at Match.com

Contextual experiences are perhaps nowhere more relevant than in the online dating space.

By mapping out all customer touchpoints across all channels, Match.com leverages a coherent, global view of the customer journey.

Subscribers receive alerts each time their profiles are viewed. They also get personalized suggestions for members’ profiles that correspond to the criteria they listed when they joined, but never the same selection of profiles more than once.

Adobe Campaign gives Match.com a single solution to manage its entire, cross-channel relationship program. This has enabled over 160 relationship marketing campaigns in addition to millions of real-time alerts sent each day. In-depth customer knowledge has also increased thanks to the automation of campaigns and customer journeys.

"Being present at the right time while avoiding being invasive is vital in a sector where everything happens instantaneously," says Muriel Lemesre, head of customer relations management. "With Adobe Campaign, we provide a total customer experience."
Create a cycle of repeatable customer interactions

Establishing the single-customer point of view requires gathering data at more granular levels than many brands are doing today. After this has been done, marketers must use insights gleaned from the data to engage individuals.

The goal should be a cycle of repeatable interactions that invite customers into deeper engagement at all touchpoints and contexts. This sets up a virtuous cycle of connection: As you interact with your customers, you gain more data about them that you can use to refine your future interactions.
Investing in your most valuable customers

Not all customers are equal, and you can’t please everyone. So identify and invest the most in the ones that are the most valuable.

These customers are those who habitually come back and make purchases or share their positive experiences with others to become brand influencers. You want to consider what they think about your products and services. Why did they choose you?

First, identify customer profiles by gathering basic demographic data, such as age, gender, and income.

Next focus on measuring the following attributes of your most valuable customers:

• Interests
• Affinity, satisfaction, loyalty, net promoter score (NPS)
• Value (purchases, positive reviews, influencing, participation)
• Scoring and creation of business value

Knowing as much as possible about your high-value customers is necessary for building meaningful, contextual experiences with them and future customers.
Brands that want to fully implement touchpoint marketing need the right technology. There isn't an off-the-shelf solution, because every brand’s needs are different. You might already have some pieces, but most brands want to adopt a touchpoint marketing platform that can sustain their needs over the long run. The following table illustrates needs and suggested solutions to deliver real-time, two-way, insight-driven interactions with individual customers.

<table>
<thead>
<tr>
<th>Need</th>
<th>Technology solution</th>
<th>Ideas for using</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deliver meaningful, contextual experiences to customers.</td>
<td>A/B testing and offer-management solution that dynamically tests and presents highly customized experiences</td>
<td>Determine which content and offers resonate most with each customer and dynamically offer them in real time.</td>
</tr>
<tr>
<td>Deliver seamless experiences across channels.</td>
<td>Cross-channel campaign management and orchestration solution</td>
<td>Design, orchestrate, and execute consistent communications across all channels, and measure results on the fly on all devices.</td>
</tr>
<tr>
<td>Turn customer interactions into actionable insights.</td>
<td>High-performance, real-time analytics solution</td>
<td>Power campaigns with rich analytics to execute programs in real time. Augment the system of record for visitor data using mobile devices.</td>
</tr>
<tr>
<td>Easily create, find, review, share, approve, and publish brand assets.</td>
<td>Web experience management solution that optimizes content authoring, management, and delivery</td>
<td>Streamline digital assets across campaigns and communities and ensure that the right content is displayed at the right time.</td>

About Adobe Campaign

Adobe Campaign, formerly Neolane, provides best-in-class campaign, offer, and personalization management capabilities for sophisticated automation and execution of marketing programs across all channels—digital and traditional. Adobe Campaign addresses a key challenge for marketers: how to build and extend relationships with their customer base to drive top-line revenue growth and ROI. Adobe Campaign is used by more than 500 of the world’s leading brands, including Alcatel-Lucent, barnesandnoble.com, Sears Canada, Sephora Europe, and Sony Music. Marketers finally have a complete, integrated solution for all their marketing efforts.

Analytics, social, media optimization, targeting, web experience management—and now cross-channel campaign management with Adobe Campaign—Adobe Marketing Cloud does it all.
